A 55-year-old female, known case of hypertension and diabetes for last 8 years, came in an eye out patient department (OPD) complaining of a sudden painful decrease in vision in her right eye since one day. On examination, her visual acuity in that eye was counting fingers from 3 feet away. Anterior segment was normal, pupillary reflexes were normal and intraocular pressure was 16 mmHg. Her funduscopic picture is shown below. What is the diagnosis?

Answer is on page 76.
