

Pictorial Quiz

Mehwish Rizwan¹, Erum Shahid²

A 12-year-old boy came to an eye outpatient department with the complain of painless gradual decrease in vision in both eyes for last one and a half month. There was history of chronic allergy, eye rubbing and frequent change of spectacles. On examination, visual acuity was counting fingers in

both eyes and no improvement with pinhole. On slit lamp examination there was thinning and bulging of cornea, oil droplet reflex on funduscopy and scissoring reflex on retinoscopy. Based on history and examination, **what is your diagnosis?**

^{1,2}Department of Ophthalmology,
Abbasi Shaheed Hospital, Karachi
